## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Lapstun et al. (6681045).

Lapstun discloses a method and a system for managing information input via a sensor device and a position-coding pattern printed on a product, comprising; coordinate reading means for reading coordinates of the senor device (101, Fig. 2)

Application/Control Number: 09/987,188

Art Unit: 2675

based on movement of the sensor device relative to the position-coding pattern (Fig. 1), the coding-coding pattern being divided into at least a first and second region (for example, name, address, and submit); and information management means for executing an information management function based on coordinates read from the first region (the submit region), and information management function managing information formed by coordinates read from the second region. Lapstun further discloses the information management function executed by the information management function means is a submit function which enables the sensor device to send coordinates from a send area of the first region to a data base device which allocates a particular send address to the send area. Lapstun further discloses connecting the system to an internet (col. 8, lines 4, 43-44), and submitting information through e-mail (col. 26, lines 30, 56).

## Conclusion

- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lapstun et al. ('870) discloses an input device.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dennis-Doon Chow whose telephone number is 703-305-4398. The examiner can normally be reached on 8:30-6:00, Alternate Monday off.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
